

SkyTruss® 23-Inch Single-Face Frame
Larger Bridges, More Design Options

exhibiting solutions

23" SkyTruss®

New to the SkyTruss exhibit system, are 23" single-sided components. Twice as tall as standard SkyTruss, the new components are perfect for creating larger headers and bridges in island – and inline – applications.

1 23" Tall Single-Sided Sections

Taller 23" components carry larger graphics and can reduce the amount of hardware required.

2 Seamless Integration

New components work seamlessly with all SkyTruss components as well as other Skyline systems.

3 Supports Accessories

A variety of accessories, like shelving, attach to SkyTruss for added functionality.

4 Magnet-Attached Graphics

Because SkyTruss has flat surfaces, graphics simply attach with magnets which are easy to install and change.

5 Backside Graphics

Graphics or colored panels can be attached to the backside of the frame to add interest and depth.
